A Solid Replacement for Mechanical Meter Types

Magnetic flowmeters are displacing traditional-technology flowmeters such as differential-pressure (DP), positive-displacement and turbine flowmeters. Magnetic flowmeters have significant advantages over traditional-technology flowmeters. Unlike DP meters, especially orifice-plate meters, magnetic meters do not have a primary element that can wear and significantly degrade measurement accuracy. Placing a constriction in the flow stream also introduces pressure loss, which can cost money. Unlike positive-displacement and turbine flowmeters, magnetic flowmeters have no moving parts. This eliminates a source of unreliability and wear. For these reasons and others, magnetic flowmeters are displacing traditional-technology flowmeters for some applications.

While the magnetic flowmeter market is a mature and stable one, there are some new product developments in the magmeter market, and these new developments favor continued growth. One recent development is the advent of two-wire magnetic flowmeters. Some other device that already has power is the power source for two-wire meters. As a result, two-wire meters are lower in cost. These meters are becoming more popular with users, as they provide added cost savings.

The market for high-strength DC magnetic flowmeters is an important reason for the growing popularity of magnetic flowmeters. High-strength DC meters are better able to handle noise and are a major reason why users are making the shift from AC to DC meters.

Flowmeter suppliers are increasing the accuracy levels of their magnetic flowmeters. Even though the majority of magnometer revenues are from meters with stated accuracy of 0.5 percent, over 20 percent of magnometer revenues are from flowmeters with accuracy levels better than 0.5 percent. This percentage will improve as more magnetic flowmeter suppliers improve the accuracy of their meters.

We Know Flow!

We help suppliers with:
- Market Research
- Comparative Analysis
- Technology Transfer
- Expert Testimony
- Seminars

We help end-users with:
- Sensor and Flowmeter Selection
- Training and Seminars
- Troubleshooting
- Advanced Control
- Complex Problems

For more information visit
